## Tile Seal & Protect Gloss

### Premium Grade Gloss Finish Tile Sealer

The shimmering gloss finish of this tile sealer protects surfaces from all kinds of stains and spillages by soaking deep into tiles to prevent any moisture from soaking through. Designed to be long lasting and tough enough to endure high levels of footfall.

Coverage: Up to 10m<sup>2</sup> per litre for one coat.

Extreme strength and durability for a long lasting finish. Easily maintained by damp mopping or spray burnishing. Protects and prolongs the life of flooring materials. For general maintenance use alongside Liquid Science™ Every Day Tile Cleaner regularly in your cleaning routine.

1. Ensure the surface to be treated is clean. It is recommended that Liquid Science™ Heavy Duty Tile Cleaner is used to remove cement and grout stains from new tiles prior to treatment.
2. After cleaning allow sufficient time for the surface to completely dry before treating to retain a gloss appearance.
3. Using a dry, lint free cloth, apply an even layer of LIQUID SCIENCE TILE SEAL & PROTECT GLOSS, as thinly as possible to the surface area being treated.
4. Immediately remove all excess TILE SEAL AND PROTECT GLOSS from the surface using a dry cloth; this will prevent any white deposits from appearing after treatment.
5. After approximately four hours the surface can be used as normal.
