

PRODUCT INFORMATION

Typhoon

Water Based Ink Remover & Recirculating Cleaner

TYPHOON has been developed for the regular cleaning of flexographic printing equipment, for the effective removal of wet or dried water based inks, while its super rinse ability allows the press to be back in production with the minimum of down time. The product was specifically formulated for minimal effect on aluminium parts and low foam recirculation systems

Spray or wipe on to surface to be cleaned. Leave for a few minutes and rub off with a cloth. Alternatively *TYPHOON* may be used in ultrasonic systems, immersion tanks and re-circulation cleaning systems.

The lower alkalinity of *TYPHOON* permits the cleaner to be in contact with machine parts for longer, keeping ink ways and supply pipes clear.
Buffered pH means minimal effect on aluminium
It's deep cleansing action removes inks from within the cell structure of Anilox rollers.
Low foam, so *TYPHOON* is ideal for re-circulation cleaning systems.
Versatile – it can also be used as a general ink cleaner.
