

# PRODUCT INFORMATION

## SPP-205

### Very Heavy Duty Anilox Cleaner

*SPP-205* is a powerful alkaline product that will break down both water and solvent based inks embedded in the cells of Anilox Rollers. To aid its effectiveness the product does not readily evaporate, so can remain active for a longer time. *SPP-205* is also an excellent on press spot cleaner.

It is recommended that the product is applied manually and agitated by brush, sponge or Flotex carpet pads, working into the roller cells. To aid in its activity and if time allows wrapping of the roller in a polythene/cling film type material can be beneficial in order to utilise the slow evaporation rate of the product. Finally remove the *SPP-205* ink residue with a water damped cloth, again agitating with brushes etc., pulling the resulting amalgam from the cells

Powerful – *SPP-205*'s heavy duty alkaline formulation facilitates the removal of most water based and solvent based inks.

Evaporates slowly – enabling longer contact times to improve results.

Versatile - can also be used as an effective on press spot cleaner.

A dependable heavy duty cleaner for Anilox rollers.

The logo for Melpass, featuring a stylized red 'M' followed by the word 'elpass' in blue lowercase letters.
